Dear Jeff:

I am writing this letter to let you know how happy I am with your product YellowGo.

I attended a clinic at Saddleback College in January and listen to your clinic on laundry. I thought this product is too good to be true. So I called you to come out and show me how to use the product and see if it would remove brick dust stains from my white baseball uniforms. I was surprised at how well it worked.

I bought a gallon and use it myself. I would recommend this product to anyone who has brick dust stain or dye transfer problems.

Sincerely,

Harry Rott  
Equipment Manager, University of Redlands

EQUIPMENT OPERATIONS

Just wanted to pass along some good info.....

We were shown a product today by Jeff Schwarz with A.L. Wilson Chemical Company called YellowGo. Now I am sure many of you have seen and used this product but I have been in this business a long time and I have not seen a product do what this did today.

We had some baseball jerseys with Red Clay stains in them that have been in the jerseys for quite awhile. The jerseys had already been dried and the stains "set-in". We had tried everything , including our Eco-lab guys, but with no luck. Today, Jeff Schwarz used YellowGo in a 5 gallon bucket with warm/hot water from the shower and put the jersey in the bucket for only about a minute or two, and the stain is gone and it did not hurt the red and navy twill on the jersey.

I was amazed and just wanted to share the info with everyone. If you are interested in the product (and he has much more), call him on his cell phone at 209-483-0833.
