

YellowGo®

**DYE REMOVER /
RESIDUAL STAIN
REMOVER**

YellowGo®

YellowGo® removes unwanted dye of any color. YellowGo can also be used to remove the last traces of ink and many other residual stains.

YellowGo is a Titanium Sulfate based reducing bleach, and is packaged in Gallons and Quarts.

YellowGo to the Rescue!

YellowGo recovers dye-stained fabric by removing unwanted dye. Results on whites are excellent. On colors, YellowGo may take out the color you want to keep. But if it removes the unwanted dye without damaging the underlying color, you win! You won't have to pay for the goods and you won't disappoint your customers.

YellowGo can be used in a washing machine for a dye-transfer load, in a pail for rescuing individual garments, or on the spotting board for a localized dye-stain or the last traces of ink or residual stain. YellowGo has the strength and staying power to take out the very toughest dye stains. Yet a skilled operator can harness that power for effective use on delicates.

When faced with a dye transfer, use YellowGo to keep more of your customers happy and coming back.

Note: YellowGo often throws sediment that can be found in the bottom of the bottle. This material is responsible for stabilizing YellowGo while it is still in its bottle. These stabilizers work equally well while in solution or as sediment. Having this sediment fall out of solution does not damage the YellowGo in any way.

DYE STRIPPING DIRECTIONS

Refer to YellowGo bottle and Material Safety Data Sheet for warnings and more information.

The hotter you make YellowGo solution, the faster and more effective it becomes. Use hotter solution on white fabric. Use cooler solution on colored fabric, to protect original colors.

To remove dye stains in laundry washwheel:

Rinse load thoroughly.

Fill wheel to low level with hot water, and add 1 to 2 oz. of YellowGo for every gallon of water.

Run until unwanted dye disappears.

Rinse thoroughly.

To remove dye stains outside washwheel:

Rinse fabric in warm water.

In a clean plastic container, prepare enough solution (1 to 2 oz. YellowGo for every gallon of warm water) to allow free movement of fabric.

Soak fabric in YellowGo solution, stirring occasionally, until unwanted dye disappears.

Rinse thoroughly with water.

To remove small dye stains at spotting board:

Prepare solution of 1 part YellowGo to 20 parts cool water in clean spotting bottle.

Flush stained area with cool water.

Apply YellowGo solution to stained area and let stand until unwanted dye disappears.

Rinse thoroughly with water.

* * *

Before using YellowGo solution on colored fabric, test on a hidden seam to see if original color is affected. Cooler YellowGo solution will usually remove unwanted dye before affecting original color. If original color is affected, rinse immediately, then soak in dilute solution of ammonia until original color is restored.

When using YellowGo on wool, silk or synthetic fabrics, add enough RustGo® to the YellowGo solution to turn it pale green.
